

_appserverx_xml_SSCELock

Description:	SSCELock parameter regulates when SSCE spell checking engine should be running in a single thread instead of using multiply threads.
Parameter type:	Boolean
Default value:	OFF
Possible values:	ON, OFF  It is recommended to have SSCELock parameter disabled to allow the engine process requests in multiply threads. Enabling this parameter might lead to significant performance degradation.

<SSCELock>OFF</SSCELock>
