

_appserverx_xml_ServiceName

Description:	ServiceName parameter sets the WebSpellChecker service name in the Service Control Manager database (only for Windows).
Parameter type:	String
Default value:	WSCAppServer
Possible values:	Any string value.

Before changing the name of the service, it is required to uninstall the service. Rename and install the service again with a new name.

```
<ServiceName>WSCAppServer</ServiceName>
```
