

_include_cloud_webspellchecker_proofreader_iframe

Initialize WProofreader in **contenteditable** **<iframe>** element using either imperative or declarative notation as it is shown in the examples below.

WProofreader (Imperative Notation):

```
<iframe id="container3" src="editable_doc.html"></iframe>

<script>
  var instance3 = WEBSPELLCHECKER.init({
    container: document.getElementById("container3"),
    autoStartup: true,
    lang: 'en_US',
    serviceId: 'your-service-ID'
  });
</script>
```

WProofreader (Declarative Notation):

```
<iframe id="container4" data-wsc-autocreate="true" data-wsc-lang="en_US" src="editable_doc.html"></iframe>

<script>
  window.WEBSPELLCHECKER_CONFIG = {
    serviceId: 'your-service-ID'
  };
</script>
```

Editable_doc.html example:

```
<html>
  <head>
    <title>WProofreader for Editable Controls</title>
  </head>
  <body contenteditable>This sampl text is aimed at demonstrating the work of WProofreader in a iframe
  element. WProofreader will find all your spelling and grammar mistakes as you type and suggest how to correct
  them. Type your text here or use this one too see an few of of the problems that WProofreader will recognized.
  click the underlined words and phras to see the suggestion options for correction.
  </body>
</html>
```
