

_include_user_dictionary_predefined_user_dictionary_parameters

You have an option to set a predefined User Dictionary on your web app for a particular editable element. With such an approach all the words added using **Add word** by your end users will be saved and stored in the dictionary that you have previously defined. To do so, specify a required User Dictionary parameter and set your predefined dictionary as a value.

Product Integration	User Dictionary Parameter
SCAYT plugin for CKEditor 4	scayt_userDictionaryName
WSC Dialog plugin for CKEditor 4	wsc_userDictionaryName
WProofreader	userDictionaryName
