

WSC Web API Services Ignore Words in all Caps

Problem

WebSpellChecker is ignoring words in all capitalizations like "CONFICENCE" and doesn't proceed mistakes in them.

Solution

To avoid the problem add the **ignore_all_caps=0** parameter to your Web API request, which regulates whether to ignore capitalized words or not. The value **0**: Do not ignore all words written in capital letters.

We plan to release the fix for the issue until the end of March 2019.
