

_appserverx_xml_CompressionLevel

Description:	CompressionLevel parameter specifies how strong the compression level should be.  For example, compression level 6 takes much less time than, say, compression level 9 and usually gives virtually the same result, thus, it is usually more effective than 9.
Parameter type:	Number
Default value:	6
Possible values:	0, 1..9 where 9 is best but slowest compression level type.
<pre><CompressionLevel>6</CompressionLevel></pre>
