

_include_uninstall_5.5.x_application_note

If you have any custom settings and/or dictionaries that you plan to reuse, you need to back up them before uninstalling, migrating, and upgrading.

For example:

- If you have already changed any values of the [AppServer parameters](#) in AppServerX.xml configuration file, you may need to transfer these settings to a new server. Otherwise, these parameters values can become incompatible.
- Back up the **CustomDictionaries** folder (<WebSpellChecker_Installation_Path>/AppServer/CustomDictionaries) with global custom dictionaries and its CustDictConfig.xml configuration file.
- Back up the **UserDictionaries** folder (<WebSpellChecker_Installation_Path>/AppServer/UserDictionaries) with all personal user dictionaries created by end users.
