

_include_wsc55x_server_configure_grammar

The Grammar engine [requires 64-bit version](#) of Java 8 or higher. The installation wizard will try to auto-detect a path to an existing Java Virtual Machine (JVM). If no path is found, you will be asked to specify the path to JVM using the next window:

The image shows a Windows-style dialog box titled "WebSpellChecker Setup". The main heading inside is "Specify Path to Java Virtual Machine". In the top right corner, there is a logo consisting of two interlocking orange loops with a checkmark inside. The main content area has a light gray background and contains the following text: "At least Java 8 is required to use the Grammar engine. Please specify the path to Java Virtual Machine (JVM).". Below this is a label "Path to JVM DLL (jmv.dll)" followed by a text input field. To the right of the input field is a "Browse..." button. Below the input field is a checkbox labeled "Skip this step". Further down, there is a paragraph: "You can also skip this step and manually add the path to JVM in the AppServerX.xml file (the PathToJavaVirtualMachine tag).". At the bottom right of the dialog, there is a "Next >" button.

WebSpellChecker Setup

Specify Path to Java Virtual Machine

At least Java 8 is required to use the Grammar engine. Please specify the path to Java Virtual Machine (JVM).

Path to JVM DLL (jmv.dll)

☐ Skip this step

You can also skip this step and manually add the path to JVM in the AppServerX.xml file (the PathToJavaVirtualMachine tag).

You have an option to set a path to JVM manually or change the auto-detected path to your custom one. Refer to the [Enabling Grammar Engine](#) to find out more.
