

## \_include\_wsc55x\_server\_apache\_webserver\_windows

2.8. Select **Apache Web Server (Apache HTTP Server)** as a web server and configure its settings.

2.9. Specify the path to the Apache HTTP Server configuration file (httpd.config).

WebSpellChecker Setup

**Specify Apache Web Server Settings**

Specify the path to the Apache Web Server configuration file (httpd.conf).

Path to the configuration file:

☒ Add "Require All Granted" directive (Apache 2.4+)

< Back   Next >   Cancel

If you selected WSC Dialog plugin for CKEditor 4 during products selection step, you need to enable FastCGI module for Apache HTTP Server:

- Download [mod\\_fastcgi.so](http://mod.fastcgi.so) from an external resource.
- Unzip the downloaded file to the Apache HTTP Server folder with other modules.
- Define the FastCGI module in the httpd.config file. To do so, add the following sample:

```
LoadModule fastcgi_module modules/mod_fastcgi.so
AddHandler fastcgi-script fcgi
```
