

_appserverx_xml_SSLCertificateStore

This parameter can be specified for Windows only.

Description:	SSLCertificateStore parameter defines the type of store used for an SSL certificate. According to Microsoft official website System Store Locations article, a system store is a collection that consists of one or more physical sibling stores. For each system store, there are predefined physical sibling stores.
Parameter type:	String
Default value:	MY
Possible values:	• MY (Personal), • ROOT (Trusted Root Certification Authorities), • TRUST (Enterprise Trust), • CA (Intermediate Certification Authorities), • USERDS (Active Directory User Object).

Example:

```
<SSLCertificateStore>MY</SSLCertificateStore>
```
