

_include_initialize_wproofreader_additional_server_parameters_server

Make sure you have specified the following server-specific options in CONFIG, which are instructing where spelling and grammar checking requests will be processed:

```
serviceProtocol: 'https',  
serviceHost: 'your_host_name',  
servicePort: '443',  
servicePath: 'virtual_directory/api' //by default the virtual directory name is wscservice
```
