Is there any way to change the hover behavior to right click in WProofreader?

As for now, to correct a problem in as you type mode, you need to **hover on** the word or phrase and either select the replacement or ignore the suggestion. There is no option to use right click for the selected word in WProofreader as it is available for the SCAYT plugin for CKEditor 4. This is an intentional move as we cannot modify the context menu of a web browser.
