

How to customize the look and feel of WProofreader?

Besides using the already available **default** and **gray** themes, with the release v5.5.8 (March 26, 2020) we added an option for our customers to create a **custom** theme for WProofreader. You will be able to overwrite the default styles and adjust the look and feel of WProofreader to the style of your product.

1. Add **theme** option to the config and specify **custom** as a value.

```
<script>
  window.WEBSPELLCHECKER_CONFIG = {
    ...
    theme: 'custom',
    ...
  }
</script>
```

2. Create you custom CSS styles to overwrite the default theme of WProofreader.

```
<style>
  .wsc-theme-custom .wsc-badge__label-button {
    background-color: blue !important;
  }
</style>
```
