# How to disable the dialog mode in WProofreader

There are two modes that WProofreader provides for text proofreading: as you type in the editable area and in a separate compact dialog. The dialog aggregates all suggestions from a text field or all text fields on the page. User can quickly navigate through all suggestions in dialog using keyboard navigation or icons/buttons on user interface (see screenshots below).

If you preference is to keep only as you type mode, you can disable the dialog mode by adding the **actionItems** option to config of WProofreader as follows (remove '**proofreadDialog**' value):

```
actionItems: ['addWord', 'ignoreAll', 'settings', 'toggle']
```
