```
<?xml version="1.0" encoding="utf-8"?>
<check_spelling>
  <misspellings>
    <word>samp1</word>
    <ud>false</ud>
    <suggestions>
      <suggestion>sample</suggestion>
      <suggestion>sampled</suggestion>
      <suggestion>sampler</suggestion>
      <suggestion>samples</suggestion>
      <suggestion>ample</suggestion>
      <suggestion>amply</suggestion>
      <suggestion>scamp</suggestion>
      <suggestion>stamp</suggestion>
    </suggestions>
  </misspellings>
</check_spelling>
```

Example 2.2 [GET]: Check spelling request (Output in JSON)

Request URL (GET):

```
https://svc.webspellchecker.net/api?cmd=check_spelling&format=json&text=This samp1 text demonstrates the work of the WebSpellChecker Web API service.&out_type=words&slang=en_US&customerid=[your-service-id]
```

Parameters:

- Command: *check_spelling*
- Format: *json*
- Text: *This samp1 text demonstrates the work of the WebSpellChecker Web API service.*
- Output: *words*
- Language: *en_US*

Request response:

```
[  
  {  
    "word": "sampl",  
    "ud": false,  
    "suggestions": [  
      "sample",  
      "sampled",  
      "sampler",  
      "samples",  
      "ample",  
      "amply",  
      "scamp",  
      "stamp"  
    ]  
  }  
]
```

Example 2.3 [POST]: Check spelling request (Output in JSON)

Here we use the same request and parameters as described in example above but form it as a POST request.

Request URL (GET):

```
https://svc.webspellchecker.net/api?
```

Body (Raw):

```
cmd=check_spelling&format=json&text=This sampl text demonstrates the work of the WebSpellChecker Web API  
service.&out_type=words&slang=en_US&customerid=[your-service-id]
```

Request response:

```
[  
  {  
    "word": "sampl",  
    "ud": false,  
    "suggestions": [  
      "sample",  
      "sampled",  
      "sampler",  
      "samples",  
      "ample",  
      "amply",  
      "scamp",  
      "stamp"  
    ]  
  }  
]
```
