

How to disable Cloud WProofreader plugin for CKEditor 5 while unit tests?

It might be needed to turn off the WProofreader plugin for CKEditor 5 while performing internal testing. For example, to avoid infinite recursion error, "RangeError: Maximum call stack size exceeded error happens", which sometimes happens in the specific configuration while using Angular. For this, not to pass our option to the CKEditor 5 start config. In the code below, do not pass **'wproofreader {...}'** part from lines #5-8 to CKEditor. Just remove.

```
ClassicEditor
.create( editorElement, {
  plugins: [ ..., WProofreader],
  toolbar: [ ..., 'wproofreader'],
  wproofreader: {
    lang: 'en_US', // sets the default language
    serviceId: 'your-service-ID', // required for the Cloud version only
    srcUrl: 'https://svc.webspellchecker.net/spellcheck31/wscbundle/wscbundle.js'
  }
})
```
