## Is there is a way to set up and customize Autocorrect pairs?

Autocorrect is a feature that automatically corrects or suggests fixes for common spelling errors as users type. For our on-premise clients, you have the flexibility to set up your own customized lists for autocorrections. This can be done by modifying the <code>language\_shortcode\_autocorrect.csv</code> files specific to the desired language. The details you can find in the <code>Autocorrect</code> article.

However, for our Cloud customers, the process is slightly different. If you're using our Cloud service, you can report the most frequent corrections to <a href="supporto-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englished-englis
